Maths stories and non-fiction books

	From a leopard with her cubs, to a frog and its tadpoles, readers will delight in counting each creature's babies and seeing where they live. There is rhyming text and a surprise search-and-find game.
	Emma and Aidan are trying to decide how many jellybeans they need. As they compete, the numbers get larger. This is a fab book!
	This book is full of facts about time, distance and world history.
	Each double-page asks a different attention-grabbing size comparison question, ranging from 'How many swimming pools in the sea?' to 'How many high jumps to the Moon?' and 'How many footballs fill the World's biggest stadium?' The answers are then calculated step-by-step and explained. (A calculator might be useful as each page also summarises the calculation required in a 'To Work It Out' box.)
	This book is brilliant for offering the context to weight and mass, with each page building on the last to compare the weight of different animals.

		A funny story about a family who, on 1st January, start receiving a penguin each day through the post. There are mathematical challenges along the way!
		This book successfully introduces the world of statistics to a young reader and adults alike.
